

# Flexibrace Non-Ligating Bracket

Product Information - for dental professionals

## Overview

Flexibrace is the first-ever non-ligating (self-ligating) bracket system with a unique one-piece Roth-type design and a highly flexible archwire-engagement slot. The flexible slot walls flex to moderate the force transmitted to the tooth, delivering gentle, continuous forces for faster, more comfortable treatment. U.S. patented.

## Technical specifications

Type: Non-ligating (self-ligating) bracket

Design: One-piece, flexible archwire slot

Slot: 0.022" x 0.028"

Prescription: Roth-type

Material: Special titanium alloy (developed with SIMTECH)

Credentials: CE Marked, ISO 13485, FDA Registered, U.S. Patented

## Clinical benefits

- Faster archwire progression; working archwires placed sooner.
- Up to 50% less chair time and over 33% shorter treatment duration.
- No elastomeric modules or special pliers required.
- Gentle, continuous forces for improved patient comfort.

## Recommended archwire

First alignment archwire no smaller than 0.016" NiTi (the 0.022" system slot opening is 0.015").
